**Breath-taking Digital Signage any way that you can dream it!**

The Comvox Digital Signage and Kiosk Design Studio, Software and Web Players, and Sign Management Solutions are low cost innovations in digital signage.....all without the outlay of thousands of dollars for servers, software, maintenance and upkeep.

Comvox makes digital signage both affordable and simple while maximizing the impact of your message. Now you can create your own signage content using your PC or Mac with web based access to one of the most comprehensive and versatile digital signage solutions available.

You can seamlessly manage 1 to 1000 or more screens, all through a low cost, simple design resource. Play signs anywhere, even bring them to your website.

The Signage Studio is the quickest, most cost-effective way of developing truly dynamic content for your personalized digital signage. It's the simple process of creating professional content, putting it on monitors in high-traffic areas — and doing it all with existing media files using the Comvox Signage development tools.

So go ahead — put together a fancy Flash presentation...or produce your own advertising using HD videography or professional photography — or heck, do it all! It can all be easily incorporated into your own Studio in the Cloud.

The Comvox Signage Studio is at the core of the Comvox Digital Signage platform. It is where you will spend most of your time building, configuring, controlling and maintaining your complete digital signage solution. And because the Comvox Digital Signage Studio plays such a vital role in the success of your final product, we felt we had to deliver an amazing platform that incorporates ease of use without compromising functionality; so that's exactly what we did. Using the Studio application you can create any number of campaigns. The campaigns unify a set of timelines which construct each of your final display outputs.

Below are some of the key features that are part of the Comvox Digital Signage Design Studio:

**Campaign** - The campaign is a global configuration which holds your complete digital signage setup. Having the ability to configure multiple campaigns allows you to easily switch your signage players from one configuration to another.

**Timeline** - A timeline is a visual representation of the sequential play list order of your media resources. A collection of all your timelines make up the final output of your digital signage presentation.

**Stations** - Screen divisions divide the screen into separate areas (AKA Zones). Areas are assigned a channel number in which you can run independent content. Included in our software is a powerful screen division WYSIWYG editor.

**Sequencing** - The sequencer is essentially a simple and effective way to serially set the play list order of all the timelines. This is done using simple drag and drop operation.

**Scheduler** - Set your timelines to play on any day and at any time. Use the scheduler to set the exact start and stop times. A graphical interface is used to get a summary of all future playlists and easily resolve conflicts.

**Advertising Engine** - Build your own Advertising network, provide to your customer proof of play, visual analytics and more. Each customer can be managed through the sub-account manager.

**Resources** - Resources include any media content which loads onto your digital Signage Player. These include video, sound, signage components and scenes. Also provided are social network portals that retrieve shared files. These portals include social networks as well as our own built in digital signage social network.

**Components** - The components include many valuable tools that you can use to enrich your signage presentation. These include RSS News, Stock Tickers, RSS Weather, RSS Video Podcasts, HTML Components, TV Tuner / Capture Card integration, Clocks and more. Components can be used directly on the timeline or within a designer scene.

**Designer** - The designer is a Lite Flash-like editor available within the Signage Studio. The designer allows for animation, custom positioning of resources within a screen division and more. The designer's final output is a scene that is used directly on the timeline. The designer includes over 120 features.

**CSS** - Set the color and font scheme that's right for you. With our flexible CSS controls you can set the Signage Studio to match your style and preference.

**Catalog** - A powerful tool that allows you to easily display unlimited number of products with a common format. The items can be viewed inside any number of catalog sub-players which include carousels, book flipping, 3D floaters and more.

**Multi-Language** - Select the language of your choice. Both Comvox Design Studio and Signage Player applications are multi-lingual.
